Other ingredients: Gelatin capsules
(Contains no known allergens)

DETAILS

Pro-biotics are live microorganisms found in certain foods that are similar to beneficial microorganisms found in the human gut. They are also called "friendly bacteria" or "good bacteria."

A probiotic is usually necessary when antibiotic treatment has been administered because antibiotics sweep our bodies clean, affecting all bacteria, good and bad. The use of probiotics found in our intestines has been shown to support proper function of the urinary tract, digestive system, and female reproductive organs

Our probiotics are allowed to grow and replenish in a mixture of pure dairy products where they can grow to full potential. The strains are now able to reproduce more rapidly to fill your intestines, giving ultimate performance and a jumpstart to proper function. Most supplements or foods that claim to contain these helpful bacteria only have one to two strains of probiotics necessary for optimum assistance. Our formula contains 12 different strains, which makes Restore extremely unique and influential.
